

Abdominal-bag®

The new Pocket for peritoneal catheter is unique in its kind thanks to the **easy and fast positioning**. It doesn't need fixing straps or elastic, nor complicated operations. It does not cause any impediment in carrying out daily activities, protects the skin from catheter objects rubbing with magnetically driven, removes easily, **is sterile**.

BENEFIT

- White color blends better with skin color, and particularly during the summer months is not visible under tiny clothes;
- The material used in non-woven Fabric on the outside, during the body contact, is medical, therefore hypoallergenic.
- The Interior of the Pocket is fully waterproof, avoiding the possibility of leakage of organic liquids. Pocket sealing also allows the patient to do all the body washing, without the risk of infiltration of liquids from outside, protecting the catheters from contamination.
- The practical introduction of catheter system through the hole, doesn't need a closure, so it allows a total protection from enlightenment, isolating it completely from the external environment.
- The Pocket is extremely light and conformable to the body of the patient.
- Standard Pocket Size (width x length) cm. 10x20
- Sterility is to ensure maximum safety and asepsis
